Education

Jaypee University of Engineering and Technology – Guna, Madhya Pradesh

July 2023 – May 2027

B.Tech, Computer Science and Engineering · CGPA: 7.5/10.0

Jay Jyoti School – Guna, Madhya Pradesh

2021 – 2023

Senior Secondary (Class XII) & Secondary (Class X), CBSE

Work Experience

IIIT Design & Manufacturing Jabalpur | Research Intern | Jabalpur, MP

May 2026 – July 2026

- Engineered **STDA**, a 4-stage gradient-free adversarial defense pipeline (Python, scikit-learn, XGBoost) shielding 5G Network IDS from evasion attacks via feature quantization.
- Designed Adaptive Log-Scaled Quantization (ALQ) to cut Attack Success Rate from 100% to **0.00%** at **99.94% F1** (1.2M flows); ranked **#1 of 19** baselines.
- Ran **9 experiments** against **30 adversarial variants** (FGSM, PGD, C&W, ZOO, PSO) on **5 datasets**; validated across 5 seeds ($p < 0.0001$) at **345,966 flows/sec**.

Trustique Assists Pvt. Ltd. | Software Development & BD Intern | Hybrid

June 2025 – August 2025

- Led **3 cross-functional teams (15–18 members)** as promoted **Team Lead**, shipping a B2B marketplace app with **100%** on-time delivery via Agile and Scrum.
- Drove **product feature prioritization** from user-behavior analytics, contributing to **30%** growth in platform user base through data-informed, API-driven feature delivery.

Skill Dzure | Machine Learning Intern | Remote

December 2024 – January 2025

- Improved ML classification accuracy by **15%** via data cleaning, feature engineering, and EDA in Python.

Technical Skills

Languages & Databases: Python, C++, Dart (Flutter), MySQL, Firebase

ML & Data Science: Adversarial ML, scikit-learn, XGBoost, Feature Engineering, NumPy, Pandas, Matplotlib

Frameworks & Tools: Flutter, ARCore, REST APIs, Git/GitHub, Android Studio, IoT, GCP

Core CS: Data Structures & Algorithms, DBMS, Operating Systems, OOP, Computer Networks

Projects

- Livestock Monitoring System – IoT & AI AgriTech** (HackNITR 7.0 Rank 1) [\[GitHub\]](#) [\[Demo\]](#)
 - Built an **IoT + cloud-ML system** – a sensor-equipped rover and animal-worn wearable (PPG, SpO₂, heart-rate, thermal, motion sensors) streaming vitals to cloud models that alert vets and owners on health abnormalities across **100+ animals per unit**.
 - Pioneered a **first-mover AgriTech insurance fraud paradox solution**: real-time monitoring curbs false livestock-insurance claims and cuts farmer premiums at **~65% lower cost** per head and vice versa.
- ARound You – AR Social Media & Tourism App** [\[GitHub\]](#)
 - Developed geo-tagged **3D AR memory sharing**, integrating the **Map Tiles API** with ARCore and Vuforia across devices. Stack: Unity, Blender, ARCore, Firebase, Dart (Flutter).
- TravelGo – AI Travel Strategy Platform** [\[GitHub\]](#)
 - Architected a full-stack platform integrating **4 APIs** (Hugging Face LLM, TripAdvisor, mapping, booking) for AI-driven itinerary generation and real-time budget planning.

Awards and Recognition

- Rank 1 – HackNITR 7.0 (International)**: Topped **6,200+ participants** from **20+ countries** with the most advanced LMS build, adding BLE and data hashing for tamper-proof telemetry.
- First Runner-Up – HACKSAGON 2025 (National)**: Advanced the hardware prototype at a product focused hackathon, refining the wearable-and-sensor build and go-to-market.
- Winner – University Ideathon 2024**: Originated the concept among **30+ teams**, pitching preventable-disease monitoring that shields farmers' high-value animals at a fraction of one animal's price.

Leadership and Activities

- Joint Secretary – VRARMR Club**: Directed a **100+ member** AR/VR/MR technical club and screened **50+ candidates** through structured technical interviews.
- Co-Organizer – Code Srijan (JUET)**: Led sponsorship team and managed problem-setting, logistics, and participant coordination for the university coding contest.
- Organizer – TACHYON 2025**: Coordinated logistics, sponsorship, and partner outreach for a university tech-fest that drew **2,000+ attendees**.
